Provide sensory supports

Sensory supports can help learners with ADHD feel less anxious and frustrated. Offer these options to everyone.

- ✓ Build in regular movement breaks.
- ✓ Provide something tactile and quiet (a stress ball, a rubber toy) to fiddle with in class to help them to focus and pay attention.
- ✓ Adapt the chair of a learner who needs to move his feet while seated. For example, tie old pantyhose to the front two legs of the chair. Invite them to sit on the chair, placing their feet on the pantyhose and bouncing their feet up and down.
- ✓ Allow learners to take off their shoes and wiggle their toes during times of anxiety, such as tests and exams.

Classroom adjustments

Build flexibility and supports into the classroom environment.

- ✓ Provide physical activity breaks throughout the day to increase engagement – for example, handing out materials, running errands or dancing to music during tidy up times.
- ✓ Break up longer tasks with short relaxation breaks to give students an opportunity to recharge and refocus.
- ✓ Introduce Swiss balls or a mini tramp into the classroom to allow ākonga to release tension. Movement assists concentration.
- ✓ Support ākonga with ADHD to alternate between different work stations or desks throughout the day.
- ✓ Note that some learners with ADHD experience light, temperature, or noise sensitivity.
- ✓ Schedule activities, such as singing, that promote relaxation.
