Suggestions for presenting content

Suggestions for presenting curriculum content in different ways.

- Provide hands-on learning activities or activities that involve movement, drama and interaction.
- Teach in 10-minute blocks. Many students with ADHD need support with working memory and recall (by holding facts in their heads briefly and manipulating, sequencing, organising, and recording factual information).
- Order or sequence information simply and clearly.
- Make use of digital technologies. These provide students with interactive resources, and the ability to pace and control their learning.
- Use a wide range of visual learning materials, such as video clips, posters, diagrams and so on.
- Establish peer tutoring. This provides many instructional variables that help students with ADHD to succeed, including frequent and immediate feedback.
