Notice where support is needed

Many symptoms of a brain injury can often be misinterpreted.

Instead, these symptoms are signals that a brain is still healing and needs a supportive environment to aid recovery.

- ✓ Behaviour changes triggered by minor events
- ✓ Reduced impulse control
- ✓ Frustration over not being able to do things they could do before
- ✓ Easily overwhelmed
- ✓ Reduced problem-solving skills
- ✓ Unaware of changes in ability
- ✓ Less able to read social cues
- ✓ Inflexible thinking
