The New Zealand Curriculum

Alcohol and other drug (AoD) sits primarily in the Health and Physical Education (HPE) learning area of *The New Zealand Curriculum*. As a context for learning it also has relevance for other areas such as the social sciences, English, and science.

FASD causes and effects on children, parents and families can be included in AoD education if teachers choose.

Health education NCEA achievement standards

Students might choose these achievement standards using the effects of alcohol on themselves and a developing fetus as a context.

NCEA Level 1

- [AS90975 Demonstrate understanding of issues to make health enhancing decisions in drug-related situations](#)

NCEA Level 2

- [AS91235 Analyse an adolescent health issue](#)

NCEA Level 3

- [AS91464 Analyse a contemporary ethical issue in relation to well-being](#)
- [AS91465 Evaluate models for health promotion](#)

A whole school approach

A positive whole-school approach including and involving the wider school community is important in shaping the values, attitudes and behaviours of the students.

The New Zealand Curriculum recognises classroom teaching is only one part of the educative process. Learning is enhanced when students are engaged at school, feel they belong, and are valued.

Tūturu supports New Zealand schools to take a whole school approach to preparing students to live in a world where alcohol and drugs exist.

A whole school approach uses multiple strategies. It incorporates the school culture, curriculum, structures and organisational models (its norms and standards), and the attitudes and values modelled within the school environment. It involves everyone in the school community working together.
